

Indian Institute of Space Science and Technology

Department of Space, Govt. of India

Thiruvananthapuram

Curriculum and Syllabus for B.TECH AVIONICS -R 2010

I SEMESTER

Code	Course Title	L	T	P	C
MA111	Geometry and Calculus	3	1	0	4
PH111	Physics I	3	1	0	4
CH111	Chemistry I	3	1	0	4
AE111	Basic Mechanical Engineering	3	0	0	3
AV111	Basic Electrical Engineering	3	0	0	3
PH131	Physics Lab I	0	0	3	1
CH131	Chemistry Lab I	0	0	3	1
AE131	Basic Engineering Lab	0	0	3	1
HS131	Communication Skills Lab	1	0	2	2
Total		16	3	11	23

II SEMESTER

Code	Course Title	L	T	P	C
MA121	Linear Algebra and Differential Equations	3	1	0	4
PH121	Physics II	3	1	0	4
CH121	Materials Science	3	1	0	4
AE121	Engineering Mechanics	3	0	0	3
AV121	Basic Electronics and Computer Engineering	3	0	0	3
MA141	Basic Programming Lab	0	0	3	1
AE141	Engineering Graphics	1	0	3	2
AV141	Basic Electrical and Electronics Engineering Lab	0	0	3	1
Total		16	3	9	22

III SEMESTER

Code	Course Title	L	T	P	C
MA211	Complex Analysis and Integral Transforms	3	0	0	3
AV211	Analog Electronic Circuit	3	0	0	3
AV212	Semi Conductor Devices	3	0	0	3
AV213	Signal and Systems	3	1	0	4
AV214	Electromagnetic and Wave Propagation	3	0	0	3
HS212	Introduction to Social Science and Ethics	2	0	0	2
AV231	Analog Electronic Circuit Lab	0	0	3	1
AV232	E-CAD Lab	0	0	3	1
Total		17	1	6	20

IV SEMESTER

Code	Course Title	L	T	P	C
MA221	Numerical Methods, Partial Differential Equations and Calculus of Variation	3	0	0	3
AV221	Digital Electronics and VLSI Design	4	0	0	4
AV222	Microprocessor and Microcontrollers	3	0	0	3
AV223	RF and Microwave Communication	3	0	0	3
AV224	Computer Organization and OS	3	1	0	4
HS222	Introduction to Economics	2	0	0	2
AV241	Digital Electronics Lab	0	0	3	1
AV242	VLSI Design Lab	0	0	3	1
AV243	Microprocessor and Microcontroller Lab	0	0	3	1
AV244	RF and Microwave Communication Lab	0	0	3	1
Total		18	1	12	23

V SEMESTER

Code	Course Title	L	T	P	C
MA311	Probability and Statistics	3	0	0	3
AV311	Digital Signal Processing	3	0	0	3
AV312	Digital Communication	3	0	0	3
AV313	Control and Guidance Systems	3	0	0	3
AV314	Instrumentation and Measurement	3	0	0	3
CH311	Environmental Science and Engineering	2	0	0	2
AV331	Digital Signal Processing Lab	0	0	3	1
AV332	Digital Communication Lab	0	0	3	1
AV333	Control and Guidance Lab	0	0	3	1
AV334	Instrumentation and Measurement Lab	0	0	3	1
Total		17	0	12	21

VI SEMESTER

Code	Course Title	L	T	P	C
AV321	Computer Networks	3	1	0	4
AV322	Power Electronics	4	0	0	4
AV323	Radar Systems	3	0	0	3
E01	Elective I	3	0	0	3
HS321	Principles of Management Systems	3	0	0	3
AV341	Computer Networks Lab	0	0	3	1
AV342	Power Electronics Lab	0	0	3	1
Total		16	1	6	19

AV451:Summer Internship and Training: 3 credits

VII SEMESTER

Code	Course Title	L	T	P	C
AV411	Navigation Systems and Sensors	3	1	0	4
E02	Elective II	3	0	0	3
E03	Elective III	3	0	0	3
E04	Elective IV	3	0	0	3
I01	Institute Elective	3	0	0	3
AV431	Navigation Systems and Sensors Lab	0	0	3	1
AV452	Comprehensive Viva-Voce I	0	0	0	2
Total		15	1	3	19

VIII SEMESTER

Code	Course Title	L	T	P	C
AV453	Comprehensive Viva-Voce II	0	0	0	3
AV454	Project Work	0	0	0	12
Total		0	0	0	15

ABBREVIATIONS

MA – Mathematics; PH – Physics; CH – Chemistry; HS – Humanities; AE – Aerospace Engineering; AV – Avionics; L – Lecture; T – Tutorial; P – Practical; C – Credits.

DEPARTMENT ELECTIVE COURSES

Sl No.	Course Code	Course name
1	AV461	Advanced Control Theory
2	AV462	Embedded Systems and Real Time OS
3	AV463	Soft Computing
4	AV464	Advanced DSP and Adaptive Filter
5	AV465	Robust and Optimal Control
6	AV466	Estimation and Stochastic Theory
7	AV467	Introduction to Optimization and OR
8	AV468	Digital Control System
9	AV469	EMI/EMC
10	AV470	Digital Image Processing
11	AV471	VLSI Design
12	AV472	Opto-Electronics and Fiber Optics Communication
13	AV473	Information Theory and Coding
14	AV474	Cryptography
15	AV475	Mobile Communication
16	AV476	Microwave Integrated Circuits
17	AV477	Antenna Engineering
18	AV478	Satellite Communication
19	AV479	Computer Graphics
20	AV480	Graph Theory and OR
21	AV481	Modern Algebra and Tensors
22	AV482	Data Structure and DBMS
23	AV483	Software Engineering
24	AV484	Wireless Mesh Network
25	AV485	Microelectronics and Microsystem Technologies

SEMESTER I

MA111

GEOMETRY AND CALCULUS

(3 – 1 – 0) 4 credits

Analytical Geometry: systems of circles, parabola, ellipse, hyperbola – polar equations – planes, sphere, cone, and cylinder.

Differential Calculus: Taylor's theorem – partial differentiation – maxima and minima by using Lagrange multipliers – concavity and convexity of a curve, points of inflexion, asymptotes, curvature – curve tracing.

Integral Calculus: lower and upper integral – Riemann integral and its properties – the fundamental theorem of integral calculus – mean value theorems – differentiation under integral sign – double and triple integrals – change of variable in double integrals – polar and spherical transforms, Jacobian of transformations.

Vector Calculus: scalar and vector fields – level surfaces – directional derivatives, gradient, curl, divergence – Laplacian – line and surface integrals – theorems of Green, Gauss, and Stokes.

Textbooks:

1. Stewart, J., Calculus: Early Transcendentals, 5th ed., Brooks/Cole (2007).
2. Kreyszig, E., Advanced Engineering Mathematics, 9th ed., John Wiley (2005).

References:

1. Greenberg, M. D., Advanced Engineering Mathematics, Pearson Education (2007).
2. James, G., Advanced Modern Engineering Mathematics, Pearson Education (2004).
3. Thomas, G. B. and Finney, R. L., Calculus and Analytic Geometry, 9th ed., Pearson Education (2003).
4. Jain, R. K. and Iyengar, S. R. K., Advanced Engineering Mathematics, Narosa (2005).

PH111

PHYSICS I

(3 – 1 – 0) 4 credits

Newtonian Mechanics: Newton's laws of motion – Galilean invariance – concepts of inertia, momentum, force, work, and energy – conservation laws – solar system, planetary orbits, Kepler's laws – Newton's law of gravitation.

Optics: corpuscular and wave theories of light – concepts of reflection, refraction, interference, diffraction, polarization, and dispersion – optical instruments.

Oscillations and Waves: damped and forced oscillations – coupled oscillators – traveling waves, superposition of waves – wave energy, energy transfer by waves – sound waves, Doppler effect.

Quantum Mechanics: inadequacy of classical mechanics – Planck's law – photoelectric effect – wave particle duality, de Broglie hypothesis – formulation of quantum mechanics, probability interpretation – Heisenberg's uncertainty principle – Schrodinger's equation.

Relativity: constancy of speed of light – relativity principle, Lorentz contraction and time dilation – mass-energy relation.

Introduction to Remote Sensing: principles of the electromagnetic spectrum – platforms for RS – spatial, spectral, and radiometric resolution – optical, microwave remote sensing – radiometric and geometric errors and their correction – types of data products – image processing applied to RS – applications of RS.

Introduction to Atmospheric Physics: earth's atmosphere, structure, classification, constituents – greenhouse effect – radiation budget, differential heating, general circulation – cloud formation and classification – solar radiation – interaction with planetary atmospheres.

Textbooks:

1. Serway, R. A. and Jewett, J. W., Principles of Physics: A Calculus Based Text, 4th ed., Thomson Brooks/Cole (2006).
2. Halliday, D., Resnick, R., and Walker, J., Fundamentals of Physics, 6th ed., John Wiley (2001).
3. Lecture notes on Remote Sensing.

References:

1. Young, H. D., Freedman, R. A., Sundin, T. R., and Ford, A. L., Sears and Zemansky's University Physics, 11th ed., Pearson Education (2004).
2. Feynman, R. P., Leighton, R. B., and Sands, M., The Feynman Lectures on Physics, Narosa (2005).
3. Beiser, A., Concepts of Modern Physics, 6th ed., McGraw-Hill (2002).
4. Tipler, P. A., Physics for Scientists and Engineers, 4th ed., W. H. Freeman (1998).
5. Crawford, F. S., Waves and Oscillations, Berkeley Physics Course, Vol. 3, McGraw-Hill (1968).
6. Giancoli, D. C., Physics: Principles with Applications, 6th ed., Prentice Hall (2004).
7. Wallace, J. M. and Hobbs, P. V., Atmospheric Science: An Introductory Survey, 2nd ed., Academic Press (2006).
8. Houghton, J., The Physics of Atmosphere, 3rd ed., Cambridge Univ. Press (2001).
9. Goody, R. M. and Walker, J. C. G., Atmospheres, Prentice Hall (1972).
10. Jensen, J. R., Remote Sensing of the Environment: An Earth Resource Perspective, 2nd ed., Prentice Hall (2007).
11. Jensen, J. R., Introductory Digital Image Processing: A Remote Sensing Perspective, 3rd ed., Prentice Hall (2005).
12. Lillesand, T. M., Kiefer, R. W., and Chipman, J. W., Remote Sensing and Image Interpretation, 6th ed., John Wiley (2007).

Chemical Kinetics: basic concepts of chemical kinetics; reaction stoichiometry, empirical rate equations, elementary reactions, order and molecularity – composite reactions: reversible reactions, chain reactions, reaction mechanisms – effect of temperature on reaction rates: Arrhenius equation – catalysis; different types of catalysts, enzyme catalysis, inhibition – dynamics of chemical processes; theories of reaction rates.

Electrochemical Systems: introduction to electrochemical cells; EMF, applications of EMF measurements, thermodynamic data – electrolytic conductance; Kohlrausch's law, Arrhenius theory, Ostwald's dilution law, transport number, electrochemical series, concentration cell.

Polymer Chemistry: basic concepts; molecular weights and distributions, thermal transitions, morphology – classification of polymers: methods of polymerization – copolymers – polymers for space applications – polymer degradation.

Propellants and Explosives: basics of explosives and propellants; classification of explosives and propellants, initiators, detonators – explosion, detonation, RDX, HMX, plastic bonded explosives, explosive polymers – different types of propellants; calorific value, efficiency factor – composite propellants.

Textbooks:

1. Jain, P. C. and Jain, M., Engineering Chemistry, 15th ed., Dhanpat Rai Pub. Company (2007).
2. Krishnamurthy, N., Vallinayagam, P., and Madhavan, D., Engineering Chemistry, Prentice Hall of India (2007).

References:

1. Atkins, P. and de Paula, J., Atkins' Physical Chemistry, 8th ed., Oxford Univ. Press (2007).
2. Laidler, K. J., Chemical Kinetics, 3rd ed., Pearson Education (2005).
3. Young, R. J. and Lovell, P. A., Introduction to Polymers, 2nd ed., CRC Press (2000).
4. Dryden's Outlines of Chemical Technology, 3rd ed., Affiliated East–West Press (1997).
5. Urbenskey, T., Chemistry and Technology of Explosives, Vol. 2, Vol. 3 and Vol. 4, Pergamon Press (1988).
6. Bailey, A. and Murray, S. G., Explosives, Propellants & Pyrotechnics, 2nd ed., Brassey's (2001).

Introduction to mechanical engineering – role of mechanical engineers – engineering thermodynamics; basic laws and thermal engineering applications – introduction to engineering materials and manufacturing processes – introduction to mechanisms – introduction to measurement systems and data analysis.

Textbooks:

1. Agrawal, B. and Agrawal, C. M., Basic Mechanical Engineering, Wiley India (2008).
2. Lecture Notes.

References:

1. Shanmugham, G., Introduction to Mechanical Engineering, Tata McGraw-Hill (2007).
2. Çengel, Y. A. and Boles, M. A., Thermodynamics - An Engineering Approach, 5th ed., Tata McGraw-Hill (2006).
3. Kalpakjian, S. and Schmidt, S. R., Manufacturing Engineering and Technology, 4th ed., Prentice Hall (2001).
4. Holman, J. P., Experimental Methods for Engineers, 7th ed., Tata McGraw-Hill (2004).

AV111	BASIC ELECTRONICS AND COMPUTER ENGINEERING	(3 – 0 – 0) 3 credits
--------------	---	------------------------------

Circuit analysis, Kirchoff's law, mesh and nodal methods – transient analysis for RLC circuit – alternating current theory – resonance, Q factor and power measurement by two wattmeter circuits – network theorems – magnetic circuit, principles of magnetic circuits – DC and AC excitation – hysteresis loop, BH curve – losses, energy, and force production – electrical machines – power electronics, SCR, TRIAC, DIAC, and UJT; application in DC-DC converter and inverter circuit – introduction to transducer – storage batteries, different technologies, specification, maintenance and usage in aerospace applications.

Textbooks:

1. Hughes, E., Electrical and Electronic Technology, Pearson Education (2002).
2. Deltoro, V., Principles of Electrical Engineering, 2nd ed., Prentice Hall (1986).

References:

1. Hayt, W. H. and Kemmerley, J. E., Engineering Circuit Analysis, 4th ed., McGraw-Hill (1986).

5. Kassakian, J. G., Schlecht, M. F., and Verghese, G. C., Principles of Power Electronics, Addison–Wesley Series in Electrical Engineering (1991).
6. Erickson, R. W., Fundamentals of Power Electronics, Chapman & Hall (1997).
7. Mohan, N., Undeland, T., and Robbins, W., Power Electronics: Converters, Applications, and Design, 2nd ed., John Wiley (1995).

- Mechanics, Thermodynamics, and Oscillations
 - Ratio of specific heats
 - Mechanical equivalent of heat
 - Moment of inertia and angular acceleration with Cobra3
 - Damped driven harmonic oscillator
 - Waves
 - Modulus of elasticity
 - Torsional vibrations and torsion modulus
 - Characteristics of a solar cell
 - Surface tension: the ring method
 - Projectile motion
 - Estimation of Celsius equivalent of absolute zero
 - Measurement of g using free fall
- Properties of Matter and Thermal Physics
 - Determination of Young's modulus
 - Determination of rigidity modulus
 - Determination of viscosity of liquid - constant and variable pressure head
 - Determination of surface tension - capillary rise method
 - Thermal conductivity of a bad conductor - Lee's disc method
 - Determination of specific heat of a liquid using steam
- Mechanics and Sound
 - Determination of moment of inertia - flywheel
 - Determination of 'g' using compound pendulum
 - Kater's pendulum - precise setting and analysis
 - Frequency of tuning fork - sonometer
- Optics
 - Focal length - convex and concave lens
 - Refractive index - spectrometer i-d curve
 - Refractive index - small angle prism
 - Spectrometer grating - wave length of spectral lines
 - Grating - minimum deviation, oblique incidence

CH131**CHEMISTRY LAB****(0 – 0 – 3) 1 credit**

- Inorganic Chemistry
 - Acidimetry and alkalimetry
 - Permanganometry
 - Dichrometry
 - Iodometry and iodimetry
- Physical Chemistry
 - Chemical kinetics
 - Viscosity of sugar solution
 - Potentiometry
 - Conductometry
- Organic Chemistry
 - Determination of purity of phenol
 - Preparation of simple organic compounds
 - Synthesis of polymers

AE131**BASIC ENGINEERING LAB****(0 – 0 – 3) 1 credit**

- Study of general purpose hand tools in workshop
- Assembly and disassembly practices of the following models
 - Gear box assembly
 - Centrifugal pump assembly along with shaft alignment practice
 - Cam and follower mechanisms assembly
 - Transducer (sensor) trainer
- Experiments on different basic machines
 - Turning exercise – straight turning, taper turning, thread cutting practice
 - Milling exercise – spur gear cutting practice
 - Welding practice – arc welding
 - Fitting practice – models with marking and drilling exercises

- Listening drills
- Pronunciation drills
- Practice special communication situations
- Vocabulary exercises and group discussions
- Functional grammar exercises
- Technical writing tips (engineering and scientific papers)
- Technical guide lines for seminar presentation
- Neuro-linguistic programming
- Passage comprehension
- Metronome practice with the help of mnemonics

Textbooks:

1. Huxley, A., Brave New World, Chatto and Windus (1932).
2. Padmanabhan, M., Harvest, Kali for Women (2008).

References:

1. Baker, A. and Goldstein, S., Pronunciation Pairs, Cambridge Univ. Press (2002).
2. Brown S. and Smith, D., Active Listening, Cambridge Univ. Press (2004).
3. Buzan, T., Use Your Head, Guild Publishing (1974).
4. Maugur, G., The English Language Laboratory Drills for Students of Science and Technology, Oxford Univ. Press (2005).
5. Orwell, G., Nineteen Eighty Four, Secker and Warburg (1949).

SEMESTER II

MA121	LINEAR ALGEBRA AND DIFFERENTIAL EQUATIONS	(3 – 1 – 0) 4 credits
--------------	--	------------------------------

Linear Algebra: matrices; solution space of system of equations $Ax = b$, eigenvalues and eigenvectors, Cayley-Hamilton theorem – group, ring, field – vector spaces: subspaces, linear dependence, independence, basis, dimension – inner product – Gram-Schmidt orthogonalization process – linear transformation; null space and nullity, range and rank of a linear transformation.

Differential Equations: first order ordinary differential equations – classification of differential equations – existence and uniqueness of solutions of initial value problem – higher order linear differential equations with constant coefficients – method of variation of parameters and method of undetermined coefficients – power series solutions – regular singular point – Frobenius method to solve variable coefficient differential equations – special functions: Legendre polynomials, Bessel's function, gamma function, and their properties – Sturm-Liouville problems – self-adjoint operators – Green's functions.

Sequences and Series: real sequences, complex sequences – sequences of functions – uniform convergence of series – test for convergence – uniform convergence for series of functions.

Textbook:

- Kreyszig, E., Advanced Engineering Mathematics, 9th ed., John Wiley (2005).

References:

1. Lay, D. C., Linear Algebra and Its Applications, Pearson Education (2007).
2. Ross, S. L., Differential Equations, Blaisdell (1995).
3. Stewart, J., Calculus: Early Transcendentals, 5th ed., Brooks/Cole (2007).
4. Jain, R. K. and Iyengar, S. R. K., Advanced Engineering Mathematics, Narosa (2005).
5. Greenberg, M. D., Advanced Engineering Mathematics, Pearson Education (2007).

PH121	PHYSICS II	(3 – 1 – 0) 4 credits
--------------	-------------------	------------------------------

Electromagnetic Theory: conservative vector fields and their potential functions, electrostatic examples – Gauss' theorem, Stokes' theorem – physical applications in electrostatics – electrostatic potential and field due to discrete and continuous charge distributions – dipole and quadrupole moments – energy density in an electric field – dielectric polarization – conductors and capacitors – electric displacement vector – dielectric susceptibility – Biot-Savart's law and Ampere's law in magnetostatics – magnetic induction due to configurations of current-carrying conductors – magnetization and surface currents – energy density in a magnetic field – magnetic permeability and susceptibility – force on a charged particle in electric and magnetic fields – electromotive force – Faradays' law of electromagnetic induction, self and mutual inductance – displacement current – Maxwell's equations in free space and in linear media – scalar and vector potentials, gauges – plane electromagnetic waves – electromagnetic energy density – Poynting

vector.

Introduction to Astronomy: coordinate system – electromagnetic spectrum, flux, magnitude scale – interstellar reddening – telescopes, stellar spectrum, H-R diagram – star formation and evolution – solar system.

Introduction to Space Systems: basic of orbital mechanics, concepts of orbits – propulsion, aerodynamic, navigation, guidance and control systems – Indian space programme.

Textbooks:

1. Griffith, D. J., Introduction to Electrodynamics, 3rd ed., Prentice Hall (1999).
2. Sadiku, M. N. O., Elements of Electromagnetics, 8th ed., Oxford Univ. Press (2007).

CH121

MATERIALS SCIENCE

(3 – 1 – 0) 4 credits

Selection of materials – structure of solids, crystal structure - defects in crystals – properties of materials; mechanical, electrical, thermal, magnetic, and optical – semiconductor materials – aluminum, magnesium, titanium, and nickel alloys – failure and structure inspections – nondestructive evaluation – composites, ceramics, smart materials, and nanomaterials – material characterization.

Textbooks:

1. Callister Jr., W. D., Materials Science and Engineering: An Introduction, 7th ed., John Wiley (2007).
2. Lecture Notes

References:

1. Cantor, B., Assender, H., and Grant, P. (edt.), Aerospace Materials, Taylor & Francis (2002).
2. Polmear, J. J., Light Alloys, Metallurgy of the Light Metals, Edward Arnold, London (1989).

4. Askeland, D. R. and Phule, P. P., The Science and Engineering of Materials, 4th ed., Thompson-Engineering (2006).

AE121

ENGINEERING MECHANICS

(3 – 0 – 0) 3 credits

Basics of statics – fundamental principles and concepts – analysis of structures – trusses, frames, machines, beams, cables – friction – center of mass and area moments of inertia – mass moment of inertia – virtual work and energy method – applications of energy method for equilibrium – stability of equilibrium – review of particle dynamics – curvilinear motion – plane kinematics of rigid bodies, rotation – plane kinetics of rigid bodies.

Textbooks:

1. Meriam, J. L. and Kraige, L. G., Engineering Mechanics: Statics (Vol. 1), Dynamics (Vol. 2), 5th ed., Wiley (2002).
2. Beer, F. B. and Johnston, E. R., Vector Mechanics for Engineers: Statics (Vol. 1), Dynamics (Vol. 2), 8th ed., Tata McGraw-Hill (2007).

References:

3. Timoshenko, S. and Young, D. H., Engineering Mechanics, 4th ed., McGraw-Hill (2007).

AV121

BASIC ELECTRICAL ENGINEERING

(3 – 0 – 0) 3 credits

Semiconductor Diodes: characteristics, applications in rectifiers and power supplies – BJT characteristics, biasing circuit – small signal and low frequency transistors – field effect devices: JFET/HFET, MOSFET operation, characteristics and small signal models – amplifiers and oscillators – operational amplifiers: parameters and characteristics, application-active filters –

digital circuits: basic logic gates-combinational circuit, flip flops-applications, memories.

Principles of Communication: basic block diagram – modulation, types – overview of satellite communication.

Microprocessor and Computer Architecture: 8 bit microprocessor-architecture, assembly language program – functional block diagram of computer architecture – introduction to computers, microcomputers and its functional block diagram.

Textbooks:

1. Boylestad, R. L. and Nashelsky, L., Electronic Devices and Circuit Theory, Pearson Education (2003).
2. Floyd, T. L., Electronic Devices, Pearson Education, 8th ed. (2007).

4. Jain, R. P., Modern Digital Electronics, McGraw-Hill (2004).
5. Mano, M. M., Digital Design, Prentice Hall (2002).
6. Gaonkar, R. S., Microprocessor Architecture, Programming, and Applications with the 8085, 5th ed., Penram International Pub. India Ltd. (2007).

MA141

BASIC PROGRAMMING LAB

(0 – 0 – 3) 1 credit

AE141

ENGINEERING GRAPHICS

(1 – 0 – 3) 2 credits

Geometrical construction of simple plane figures – free hand sketching – drawing scales – graphical communication through multiple projections – first angle and third angle projections – simple projection of points, lines and planes – projection of simple solids in simple positions (orthographic and isometric) – solid sections – intersection of solids – development of surfaces – introduction to CAD – creation of simple drawing – solid modeling – auxiliary projection – section views.

Textbook:

- Varghese, P. I., Engineering Graphics, VIP Publishers (2007).

References:

1. Bethune, J. D., Engineering Graphics with AutoCAD, Prentice Hall (2007).
2. Venugopal, K., Engineering Drawing and Graphics, 2nd ed., New Age International (1994).
3. Luzadder, W. J. and Duff, J. M., Fundamentals of Engineering Drawing, 11th ed., Prentice Hall (1992).

AV141	BASIC ELECTRICAL & ELECTRONICS ENGINEERING LAB	(0 – 0 – 3) 1 credit
--------------	---	-----------------------------

- Electrical Engineering Lab
 - Magnetic measurements
 - Three phase power measurement
 - Verification of theorems
 - Characteristic of electrical machines (AC and DC)
- Electronics Engineering Lab
 - Implementation of digital circuits
 - Design of electronic system using operational amplifiers
 - Device characteristic
 - Power supply design
 - Wave shaping circuits: clippers and clampers
 - Biasing of transistor

SEMESTER III

MA211

COMPLEX ANALYSIS AND INTEGRAL TRANSFORMS

(3 - 0 - 0) 3 credits

Complex Variable: Complex numbers and their geometrical representation – functions of complex variable – limit, continuity and derivative of functions of complex variable – analytical functions and applications – harmonic functions – transformations and conformal mappings – bilinear transformation – contour integration and Cauchy's theorem – convergent series of analytic functions – Laurent and Taylor series – zeroes and singularities – calculation of residues – residue theorem and applications.

Fourier Series: Fourier series expansion of periodic functions with period two – Fourier series of even and odd functions – half-range series – Fourier series of functions with arbitrary period – conditions of convergence of Fourier series.

Fourier Transform: Fourier integral – the Fourier transform pair – algebraic properties of Fourier transform – convolution, modulation, and translation – transforms of derivatives and derivatives of transform – inversion theory.

Laplace Transform: Laplace transforms of elementary functions – inverse Laplace transforms – linearity property – first and second shifting theorem – Laplace transforms of derivatives and integrals – Laplace transform of Dirac delta function – applications of Laplace transform in solving ordinary differential equations.

AV211

ANALOG ELECTRONIC CIRCUIT

(3 - 0 - 0) 3 credits

Basic stability and device stabilization techniques (BJT). Small signal low & high frequency models for (BJT, FET, MOSFET), Large signal amplifiers, Differential Amplifier, Instrumental amplifiers, Integrated circuits, Tuned amplifiers, Feedback amplifiers, Oscillators, Multivibrators, Wave shaping circuits, Filter design.

Textbook:

1. J. Millman and C.C. Halkias, Integrated Electronics - Analog and Digital circuit system, McGraw Hill, 1996.

References:

1. David A. Bell, Electronic Devices and Circuits, Prentice Hall of India, 2006.
2. Donal L. Schilling and Charles Beloue, Electronic Circuits , Third Edition, McGraw Hill, 2005.
3. David A. Bell, Solid State Pulse Circuits , Prentice Hall of India, 1992.
4. John D. Ryder, Electronic Fundamental and Applications - Integrated and Discrete system , Prentice Hall of India, 1999.
5. J. Millman and H. Taub, Pulse Digital and Switching waveform-Devices and circuits , McGraw Hill International, 1965.

AV212

SEMI CONDUCTOR DEVICES

(3 - 0 - 0) 3 credits

Semiconductor fundamentals, crystal structure, Fermi level, energy-band diagram, intrinsic and extrinsic semiconductor, carrier concentration, scattering and drift of electrons and holes, drift current , diffusion mechanism, generation and recombination and injection of carriers, transient response, basic governing equations in semiconductor, physical description of p-n junction, transport equations, current – voltage characteristics and temperature dependence, tunneling current, small signal ac analysis.

BJT equivalent circuits and modeling frequency response of transistors, pnpn diode, SCR, MOS structure, flat-band threshold voltages, MOS static characteristics, small signal parameters and equivalent circuit, charge – sheet model, strong, moderate and weak inversion, short channel effects, scaling laws of MOS transistors, LDD MOSFET, NMOS and CMOS IC technology, CMOS latch –up phenomenon, ideal Schottky barrier, current voltage characteristics, MIS diode heterojunctions devices, optical absorption in a semiconductor, photovoltaic effect, solar cell, photoconductors, PIN photodiode, avalanche photodiode, LED, semiconductor lasers; negative conductance in semiconductors, transit time devices, IMPATT, Gunn device, BiCMOS device

Textbook:

1. SZE, Semiconductor Physics and Devices, Wiley Student Edition, 2007.

References:

1. Ben G. Streetman and Sanjay Kumar Banerjee, Solid State Electronic Devices, Dorling Kindersley, 2007.
2. Sima Dimitrijevic, Principles of Semiconductor Devices, Oxford University Press, 2006.
3. Robert.F. Pierret, Semiconductor Device Fundamentals, Prentice Hall of India, 2007.

AV213

SIGNAL AND SYSTEMS

(3 - 1 - 0) 4 credits

Classification of signals and systems, Types of signals, Types of systems, Analysis of Continuous Time Signals and LTI systems: Fourier series, Fourier Transform, Laplace Transform, Differential Equation, State Space Matrix, Analysis of Discrete Time Signals and LTI DT systems: Fourier

Transform, DFT, Z Transform, Wavelet transform, Difference Equations, State variable equation and matrix, some applications – communication, control systems etc.

Textbooks:

1. R.F. Ziemer, W.H. Tranter and D.R. Fannin, Signals and Systems - Continuous and Discrete, Prentice Hall, 2006.
2. B.P. Lathi, Linear Systems and signals, 2nd edition, Oxford University Press, 1998.
3. Simon Haykin, Barry Van Veen, Signals and Systems, John Wiley and Sons (Asia) Private Limited, 2005.
4. A.V. Oppenheim, A.S. Willsky and I.T. Young, Signals and Systems, Prentice Hall, 2006.

References:

1. Douglas K. Lindner, Introduction to Signals and Systems, Mc-Graw Hill International, 1999.
2. Robert A. Gabel, Richard A. Roberts, Signals and Linear Systems, John Wiley and Sons (SEA) Private Limited, 1995.
3. M. J. Roberts, Signals and Systems - Analysis using Transform methods and MATLAB, Tata McGraw Hill, 2003.
4. J. Nagrath, S. N. Sharan, R. Ranjan, S. Kumar, Signals and Systems, Tata McGraw Hill, New Delhi, 2001.
5. Ashok Ambardar, Analog and Digital Signal Processing, 2nd Ed., Brooks/ Cole Publishing Company, 2006.
- A. Papoulis, Circuits and Systems: A Modern Approach, HRW, 1980.
6. B.P. Lathi, Signal Processing and Linear Systems, Oxford University Press, 1998.

AV214 ELECTROMAGNETIC AND WAVE PROPAGATION (3 - 0 - 0) 3 credits

Electromagnetic Theory: Electrostatics- Magnetostatics- Ampere's Law- Faraday's law- Electromagnetic Energy – Boundary Conditions – Maxwell's Equations – Pointing Vector. Electromagnetic Waves: Wave equation & Uniform Plane waves – Plane waves in lossy and lossless mediums – Normal and oblique incidences of plane waves.

Transmission line theory: LCR model for transmission lines – Analogy with wave equations – characteristics of lossless lines – VSWR, Impedance matching – Smith chart – Case study.

Waveguides: TEM, TE, TM Waves – wave propagation in Rectangular, Circular & Planar wave guides.

Fundamentals of Antenna: Radiation – Hertzian dipole antenna – Gain and Directivity.

Textbooks:

1. William H. Hayt, Engineering Electromagnetics, Tata McGraw Hill 7th edition.

References:

1. E.C. Jordan & K.G. Balmain, Electromagnetic Waves and Radiating Systems, Prentice Hall of India 2nd edition 2003. (Unit IV, V). McGraw-Hill, 9th reprint.

2. J.D.Ryder , Networks, Lines and Fields, Prentice Hall of India, New Delhi, 2003.
3. M.N.O.Sadiku, Elements of Engineering Electromagnetics, Oxford University Press, Third edition.
4. Ramo, Whinnery and Van Duzer, Fields and Waves in Communications Electronics, John Wiley & Sons (3rd edition 2003).
5. David M.Pozar, Microwave Engineering, 2nd Edition – John Wiley.
6. David K.Cheng, Field and Waves in Electromagnetism, Pearson Education, 1989.

HS212	INTRODUCTION TO SOCIAL SCIENCE AND ETHICS	(2 - 0 - 0) 2 credits
--------------	--	------------------------------

Social Science: Introduction to sociology, anthropology – social science research design and sampling.

Ethics: Professional and personal ethics – values & norms and human rights.

Textbooks:

1. Lecture Notes.

References:

1. Perry, J. and Perry, Contemporary Society: An Introduction to Social Science, 11thed., Allyn & Bacon (2005).
2. Giddens, A., Sociology, 5th Edition. Wiley (2006).
3. Flyvberg, B, Making Social Science Matter, Cambridge Univ. Press (2001).
4. Singer, P., A Companion to Ethics, Wiley-Blackwell (1993).

AV231	ANALOG ELECTRONIC CIRCUIT LAB	(0 - 0 - 3) 1 credit
--------------	--------------------------------------	-----------------------------

1. Feedback amplifier and multistage amplifiers.
2. LC and RC oscillators.
3. Tuned amplifier and stage tuned amplifiers.
4. Multivibrators.
5. Schmitt Trigger.
6. Wave shaping circuits.
7. Differential Amplifiers, CMRR measurements.

AV232	E-CAD LAB	(0 - 0 - 3) 1 credit
--------------	------------------	-----------------------------

1. Simulation of analog electronics circuits using ORCAD (PSpice)
2. PCB layout using ORCAD
3. Application to electronic system design.

SEMESTER IV

MA221

NUMERICAL METHODS, PARTIAL DIFFERENTIAL EQUATIONS AND CALCULUS OF VARIATION

(3 - 0 - 0) 3 credits

Numerical Methods: Solution of algebraic and transcendental equations – solution of system of linear equations – numerical integration – interpolation and curve fitting – solution of ordinary differential equations – approximation of functions.

Partial Differential Equations: Introduction to PDE – modeling Problems related and general second order PDE – classification of PDE: hyperbolic, elliptic and parabolic PDE – canonical form – scalar first order partial differential equations – method of characteristics – Charpits method – quasi-linear first order equations – shocks and rarefactions – solution of heat, wave, and Laplace equations, using separable variable techniques and Fourier series..

Calculus of Variations: Optimization of functional, Euler Lagranges equations, First Variation, Isoperimetric Problems. Rayleigh-Ritz method.

Textbook:

1. Kreyszig, E., Advanced Engineering Mathematics, 9th ed., John Wiley (2005).

References:

1. Jain, M. K., Iyengar, S. R. K., and Jain, R. K., Numerical Methods for Scientific and Engineering Computation, New Age International (2003).
2. Sneddon, I. N., Elements of Partial Differential Equations, McGraw-Hill (1986).
3. Renardy, M. and Rogers, R. C., An Introduction to Partial Differential Equations, 2nd ed., Springer-Verlag (2004).
4. Greenberg, M. D., Advanced Engineering Mathematics, Pearson Education (2007).
5. McOwen, R. C., Partial Differential Equations - Methods and Applications, 2nd ed., Pearson Education (2003).

AV221

DIGITAL ELECTRONICS AND VLSI DESIGN

(4 - 0 - 0) 4 credits

Boolean Algebra, standard representation and Minimization Procedures. Logic families, combinational circuits, asynchronous and synchronous sequential circuits, Memories. Introduction to VLSI systems- CMOS logic - MOS transistor theory- Layout design rules- Circuit characterization and performance estimation- Circuit simulation- Combinational and sequential circuit design- Static and dynamic CMOS gates- Memory system design- Design methodology and tools-HDL. Design of FPRG, Complex CMOS design.

Textbook:

1. Morris Mano, Digital Design, 4th ed., Prentice-Hall of India, 2006.
2. John.F.Wakerly, Digital Design Principles and Practice, 3rd edition, Pearson Education, 1990.

References:

1. William I. Fletcher, An Engineering Approach to Digital Design, Prentice-Hall of India, 1980.
2. T.L. Floyd, Digital Fundamentals, Charles E. Merrill publishing Company, 1982.
3. R.L. Tokheim, Digital Electronics - Principles and Applications, Tata McGraw Hill, 1999.
4. R.P. Jain, Modern Digital Electronics, Tata McGraw Hill, 1999.
5. N. Weste and D. Harris, CMOS VLSI Design: Circuits and Systems Perspective, Addison Wesley, 2004.
6. Wayne Wolf, Modern VLSI Design, Prentice Hall, 1998.
7. Peter J. Ashenden, The Designer's Guide to VHDL, Harcourt Asia private Limited & Morgan Kauffman, 1996.
8. Douglas A. Pucknell and Kamran Eshraghian, Basic VLSI Design Systems and Circuits, Prentice Hall of India, 1993.

AV222	MICROPROCESSOR AND MICROCONTROLLERS	(3 - 0 - 0) 3 credits
--------------	--	------------------------------

Microprocessor family - internal architecture, addressing modes, interrupts, assembly Language programming, Instruction types, Interrupts & its application for 8086 – 8254, 8259, 8255- interfacing devices, coprocessors. DMA, DRAM, Cache memories, Coprocessor & EDA tools - Applications.

Micro controllers - Types of micro controller, Processor Architecture, Atmel and PIC Microcontroller features, Addressing Modes, Instruction set. Timers, Serial I/O, Parallel I/O Enhanced features & programming. Application Design emulators, real time operating systems. Case study of a sample Microprocessor / Microcontroller based system.

Textbook:

1. R. Gaonkar, , Microprocessor Architecture, Programming, and Applications with the 8085, Penram International Publisher India Ltd, 5th Ed, 2007.
2. Kenneth J. Ayala, The 8051 Microcontroller- Architecture, Programming and Applications, Penram International, 1996.

References:

1. Barry B. Brey , The Intel Microprocessors 8086/8088, 80186/80188, 80286, 80386, 80486, Pentium, and Pentium Pro Processor Architecture, Programming and Interfacing, Prentice Hall, 2005.
2. Douglas V. Hall, Microprocessors and Interfacing: Programming and Hardware, Glencoe McGraw-Hill; 2 Sub edition, 1991.

AV223	RF AND MICROWAVE COMMUNICATION	(3 - 0 - 0) 3 credits
--------------	---------------------------------------	------------------------------

Introduction to RF communication, RF transmitter, RF receiver, Microwave Network Analysis; Scattering matrix parameters, Transmission matrix, Signal flow graph, Impedance matching, Single and double stub tuning, problems. Microwave wave-guide and planar-based passive devices, Microwave resonators, Power dividers, directional couplers and filters, Isolator, Circulator, phase shifter, Microwave signal generators: Klystron, magnetron and TWT. Microwave systems design, Microwave Amplifier design, Gain and stability, Oscillator design,

Broadband systems, noise figure and link budget.

Textbook:

1. David M. Pozar, David M. Pozar, 2nd Ed., John Wiley & Sons, Inc. 2004.

References:

1. R.E. Collin, Foundations for Microwave Engineering, McGraw-Hill, 1992.
2. S.M. Liao, Microwave Devices and Circuits, Prentice Hall Of India Private Limited.
3. P.A. Rizzi, Microwave Engineering, Prentice-Hall, Englewood Cliffs, NJ, 1988.
4. T.S. Laverghetta, Modern Microwave Measurements and Techniques, Artech House, Norwood, MA, 1988.

AV224

COMPUTER ORGANIZATION AND OS

(3 - 1 - 0) 4 credits

Overview: functions of Operating systems, layered architecture; basic concept; interrupt architecture, system calls and notion of a process and threads; synchronization and protection issues; scheduling; memory management including virtual memory management including virtual memory and paging techniques; i/o architecture and device management; file systems; distributed file systems; Case studies of Unix , Windows NT
Introduction to computer organization: Structure and function of a computer - Processing unit: Characteristics of CISC and RISC processors - Performance of a processing unit. Memory subsystem : Memory hierarchy - Main memory unit - Internal organization of a memory chip - Organization of a main memory unit - Error correction memories - Interleaved memory units - Cache memory unit - Concept of cache memory - Mapping functions - organization of a cache memory unit - Fetch and Write mechanisms - Memory management unit - Concept of virtual memory - Address translation - hardware support for memory management. Input / Output subsystem: Access of I/O devices - I/O ports. - I/O control mechanisms - Program controlled I/O - Interrupt controlled I/O - DMA controlled I/O - I/O interfaces - System buses - peripherals - Terminals - Video displays - Magnetic storage disks - magnetic tapes - CD ROMs. High-Performance processors: Instruction pipe lining - Pipe line - Hazards - Super scalar processors - Performance considerations. Multi processor systems: Shared memory systems - Interconnection networks - Caches in multi processor systems.

Textbooks:

1. Abraham Silberschatz, Peter Baer Galvin and Greg Gagne Operating System Concepts, 7th Edition, Wiley publications, 2005.

References:

1. Tanenbaum A.S., Operating systems:Design and implementation, Prentice Hall, 1992.
2. Tanenbaum A.S., Structured computer organization, 4th edition, PHI, 1999.
3. Stallings W, Operating systems, second edition, prentice Hall, 1995.
4. Hayes, J.P, Computer architecture and Organisation, McGraw Hill, 1998.

HS222**INTRODUCTION TO ECONOMICS****(2 - 0 - 0) 2 credits**

Exploring the subject matter of Economics: why we study economics – types - definitions – economic systems – economics as a science.

Principles and Concepts of Micro Economics: demand – supply – production – costs – markets – equilibrium.

Basics of Macro Economics: role of government – national income concepts – inflation concepts – classical vs. Keynesianism.

Economic Problems and Policies: meaning of development – problems of growth – population – agriculture and industry – balance of payments – planning – study report related to economics of space program.

Textbooks:

1. Samuelson, Paul A. and William D. Nordhaus, Economics, 17th ed., McGraw-Hill (2005).
2. Dewett, K. K., Modern Economic Theory, 22nd ed., S. Chand & Co.
3. Thirlwall, A. P., Growth and Development with Special Reference to Developing Economies, Palgrave (2003).

References:

1. Gardner, A., Macroeconomic Theory, Surjeet Publications (1998).
2. Koutsoyiannis, A., Modern Microeconomics, 2nd ed., Palgrave Macmillan (2003).
3. Black, J., A Dictionary of Economics, Oxford Univ. Press (2003).
4. Meir, J. M. and Rauch, J. E., Leading Issues in Economic Development, 7th ed., Oxford Univ. Press (2005).
5. Todaro, M. P. and Smith, S. C., Economic Development, 8th ed., Pearson Education Ltd. (2008).
6. Economic Survey 2008, Government of India, Ministry of Finance.
7. O'Connor, D. E., The Basics of Economics, Greenwood Press (2004).

AV241**DIGITAL ELECTRONICS LAB****(0 - 0 - 3) 1 credit**

1. Design and implementation of combinational circuits using basic gates for arbitrary functions, code converters, parity generator / checker, magnitude comparator etc.
2. Design and implementation of application using multiplexers, Decoders/encoders.
3. Design and implementation of synchronous & asynchronous sequential circuit.
4. FPGA and Programming.

AV242**VLSI DESIGN LAB****(0 - 0 - 3) 1 credit**

1. Modeling of Combinational Digital system using VHDL/Verilog
2. Modeling of Sequential Digital system using VHDL/Verilog.
3. Writing Test Benches Using Verilog / VHDL
4. Design and Simulation of ALU using FPGA.

AV243**MICROPROCESSOR AND MICROCONTROLLER
LAB****(0 - 0 - 3) 1 credit**

1. Programming with 8086 – 8-bit / 16-bit multiplication/division using repeated addition/subtraction
2. Programming with 8086 - code conversion, decimal arithmetic, bit manipulations.
3. Programming with 8086 - matrix multiplication, floating point operations
4. Programming with 8086 – String manipulation, search, find and replace, copy operations, sorting. (PC Required)
5. Experiment based on Interfacing and control application
6. PIC/ATmel Microcontroller based experiments – Simple assembly language programs (cross assembler required).
7. PIC/ATmel Microcontroller based experiments – Simple control applications (cross assembler required).

AV244**RF AND MICROWAVE COMMUNICATION LAB****(0 - 0 - 3) 1 credit****RF Experiments**

1. Analyze the radiation patterns of the different antennas.
2. Experiments on Coaxial Line Section:
 - Measurement of VSWR
 - Measurement of unknown impedance
 - Stub matching
 - Measurement of Gain and Noise figure
3. Simulation and Testing of RF Circuits:
 - RF Tuned Amplifier
 - RF Oscillator
 - RF Crystal Oscillator
 - IF Amplifier
 - RF Mixer
 - RF Filters (LP, HP, BP, Notch Filter)
4. Stability

Microwave Experiments

1. Characteristics of Reflex Klystron Oscillator
2. Characteristics of Gunn Diode Oscillator
3. Study of Power Distribution in directional coupler, E / H Plane Tee, Magic Tee.
4. Radiation pattern of Horn Antenna.
5. Frequency Measurement
6. Impedance measurement by Slotted Line Method.

SEMESTER V

MA311

PROBABILITY AND STATISTICS

(3 - 0 - 0) 3 credits

Probability Distributions: Random Variable: discrete and continuous random variables – probability distributions: binomial distribution, hyper geometric distribution, Poisson approximation to the binomial, geometric distribution, normal distribution, normal approximation to the binomial distribution, uniform distribution, gamma distribution, beta distribution, and Weibull distribution – mathematical expectation and moments: mean, variance, moment generating function, and characteristic function.

Sampling Distributions and Inference Concerning Means: Population and samples – central limit theorem – sampling distributions of mean and variance – point estimation – confidence interval for mean, variance and proportions – tests of hypotheses: the null hypotheses and the significance tests – control charts for variables and attributes – acceptance sampling by attributes – simple, double and sequential sampling plans – design of experiments.

Correlation and Regression Analysis: Curve fitting by the method of least squares – chi-square test of goodness of fit – contingency tables – inference based on the least square estimators – regression – correlation – inference concerning correlation coefficient.

Textbooks:

1. Johnson, R. A., Miller & Freund's Probability and Statistics for Engineers, 6th ed., Prentice Hall (2000).
2. Medhi, J., Stochastic Processes, Wiley Eastern Ltd. (1982).

3. S.Salivahanan, A.Vallavaraj, Gnanapriya, Digital Signal Processing, McGraw-Hill / TMH, 2000.
4. Johny R.Johnson, Introduction to Digital Signal Processing, Prentice Hall, 1984.
5. S.K.Mitra, Digital Signal Processing- A Computer based approach, Tata McGraw-Hill, 1998, New Delhi.

AV312**DIGITAL COMMUNICATION****(3 - 0 - 0) 3 credits**

Fundamentals of Digital communications, channel capacity, bit error rate, media characteristics, FDM, TDM, TDD,FDD,CDMA, Statistical Multiplexing; Framing and Synchronization; M-array modulation – Formatting – Pulse schemes – Pulse code modulation – Sampling – Quantization– Correlative coding, Base Band Demodulation/Detection - Maximum Likelihood - Matched Filter, Inter Symbol Interference, Equalization. Signal-space Analysis-Band-pass Modulation: Amplitude Shift Keying, Frequency Shift Keying, Phase Shift Keying, Demodulation-correlative receiver. Communication Link Analysis, Synchronization, Source-Coding, Multiplexing and Multiple Access, Spread Spectrum Techniques, Fading Channels.

Textbook:

1. Simon Haykin, Digital Communication, John Wiley & Sons Paperback edition, 2006.

References:

1. Bernard Sklar, Digital Communication, 2nd Ed., Pearson Education, 2001.
2. Couch L.W., , Digital and Analog Communication Systems, Prentice Hall, 1996.

7. M K Simen, Digital Communication Techniques, Signal Design and detection, Prentice Hall of India, 1999.

AV313

CONTROL AND GUIDANCE SYSTEMS

(3 - 0 - 0) 3 credits

Control systems: Introduction to control theory- control system components, Modeling of physical -transfer function, block diagram, signal-flow graph and state-space representation. Time domain and Frequency domain response -relationship between the time and frequency domain responses. Stability - concept of pole and zero - Routh-Hurwitz Criteria, Nyquist criteria, Root locus and Bode-plot; P-I, P-D, P-I-D controller design, tuning of controllers; lead and lag compensators. Sampled-data systems sample and hold operations for digital control, controller design for digital control systems.

Guidance: Fundamentals of guidance Basic results in interception and avoidance Taxonomy of guidance laws, command and booming guidance, classical guidance laws Comparative study of guidance laws from the point of view of time, missdistance, launch boundaries, control effort and implementation difficulties. Basic concepts of launch vehicle guidance, Explicit and Implicit guidance, Flat Earth guidance, Perturbation guidance, Velocity to be gained guidance concept, Delta guidance, Q guidance, Cross product steering, linear perturbation guidance, Open loop and Closed loop guidance.

Textbook:

1. Katsuhiko Ogata, Modern Control Engineering, 4th Edition, Prentice Hall of India publishers, New Delhi, 2006.

References:

1. Gopal I and Nagrath N, Control systems, Wiley Eastern Ltd, NewDelhi, 1985.

7. Xue, Chen, Atherton, Linear Feedback Control Analysis and Design with MATLAB, SIAM Publications, 2006.
8. Qiu, Zhou, Introduction to Feedback Control, Prentice Hall, 2009.

AV314

INSTRUMENTATION AND MEASUREMENT

(3 - 0 - 0) 3 credits

Introduction to measurement, error analysis, Static and dynamic performance characteristics of instruments. Basic voltmeter and Ammeter wattmeter and energy meter design, Electronic voltmeter, Digital Measurement systems (DMM, Frequency, A/D and D/A), spectrum analyzer, filter design, Hall effect devices. DC bridges for resistance measurements. A.C. Bridges-Measurement of inductance and capacitance, Earth resistance measurements. Frequency and

Power factor meters, Potential and Current Transformers, D.C. and A.C. potentiometer, Instrumentation amplifiers. Transducers - strain gauges, inductive and capacitive transducers, piezoelectric and Hall-effect transducers, Temperature sensors, photo-diodes & transistors, digital transducers, signal conditioning and telemetry, introduction to smart sensors and MEMS, Data Acquisition Systems.

Textbooks:

1. A.K. Sawhney, A course in Electrical and Electronics Measurements and Instrumentation, Dhanpat Rai and Sons, New Delhi, 2006.

References:

1. Doebelin, E.O., Measurement systems: Application and Design, 5th ed., McGraw hill, 2003.

3. Albert D. Helfrick, William D. Cooper, Modern Electronic Instrumentation and Measurement Techniques., Prentice Hall of India Private Limited.

CH311	ENVIRONMENTAL SCIENCE AND ENGINEERING	(2 - 0 - 0) 2 credits
--------------	--	------------------------------

Awareness of the impact of environment on quality of life – natural resources – biological systems – bio-geo chemical cycles – chemical processes; water treatment operations, water sampling, storage, quality measurement – oxygen demand – detection of pollutants – current environmental issues; pollutants, global warming, causes and consequences, air pollution, organic and inorganic air pollutants, smog-acid mine drainage, accumulation of salts in water – soil formation; micro and macro nutrients in soil, pollutants in soil – green chemistry: an alternative tool for reducing pollution – engineering interventions; flow sheets, waste minimization, e-waste management, ASP, reverse osmosis, trickling filter – environmental management; solid, liquid waste management, hazardous wastes, ISO standards – Kyoto protocol, Montreal protocol, Euro norms.

Textbook:

1. Rao, V., Textbook of Environmental Engineering, Prentice Hall of India (2002).

References:

1. Baird, C. and Cann, M., Environmental Chemistry, 3rd ed., W. H. Freeman and Company (2005).

10. Vanloon, G. W. and Duffy, S. J., Environmental Chemistry: A Global Perspective, Oxford Univ. Press (2000).

AV331	DIGITAL SIGNAL PROCESSING LAB	(0 - 0 - 3) 1 credit
--------------	--------------------------------------	-----------------------------

1. Study of DFT
2. IIR Filter Design
3. FIR Filter Design
4. FIR Kaiser and Equiripple Filter Design
5. Comparison of FIR and IIR Filter Design
6. Study of Simulink and Signal Processing Tool Box
7. Multirate Signal processing
8. DSP Processor, TMS 320C6713, DSK Experiments
9. TMS 320C6713-Real Time Processing

AV332	DIGITAL COMMUNICATION LAB	(0 - 0 - 3) 1 credit
--------------	----------------------------------	-----------------------------

1. Design and implementation of Pulse Amplitude Modulator and Demodulator.
2. Design and implementation of ASK, FSK, and PSK modulators and demodulators
3. Design and implementation of PWM and PCM modulators and demodulators
4. Design and implementation of DM and ADM modulators and demodulators
5. Design and study Time Division Multiplexer.
6. Design and study Frequency Division Multiplexer.
7. Eye Diagram -for studying the effects of intersymbol interference and other channel impairments.
8. Analysis of signal space constellation of different modulation schemes.
9. Comparison of different modulation with Bit Error rate using Simulink

AV333	CONTROL AND GUIDANCE LAB	(0 - 0 - 3) 1 credit
--------------	---------------------------------	-----------------------------

1. Modeling Simulation, control and implementation for
Inverted pendulum
Magnetic Levitation system
Twin Rotor MIMO system
2. Realization and practical issue of PID controller
3. Actuator control for launch vehicle control
4. Hands on experience with LEGO Programmable Robots

AV334	INSTRUMENTATION AND MEASUREMENT LAB	(0 - 0 - 3) 1 credit
--------------	--	-----------------------------

1. Resistance measurement through Wheatstone bridge
 - DC excitation
 - AC excitation

2. Measurement of capacitance
 - Wein bridge
 - Schering bridge
 - Small variation in capacitance
3. Inductive transducers
 - Inductance measurement
 - LVDT
4. Variable resistivity transducers
 - Strain guage
 - Resistance of a salt solution
 - Variable area transducer
5. Measurement of temperature
 - Thermocouple
 - Thermistor
 - RTD
6. Light detector
 - Photo resistor
 - Photo transistor
 - Photo diode
7. Calibration of flow and level
8. Calibration of Value and pressure gauges
9. Dead weight tester for pressure calibration
10. PC based temperature calibrator
11. Mini Project

SEMESTER VI

AV321

COMPUTER NETWORKS

(3 - 1 - 0) 4 credits

Network Topology, OS layers, Point to point and broadcast communications, Multi access protocols: Aloha, CSMA and its variations, Token Ring; Error Control Techniques; Flow control; Bridges, Repeaters, Switches and the spanning tree protocol. Network: Routing, Congestion control, LAN, WAN, MAN, Ethernet, TCP/IP protocols; Multicast and mobile routing, Sensor networks.

Textbook:

1. Andrew S. Tannenbaum, Computer Networks, PHI, Fourth Edition, 2003.

References:

1. James .F. Kurose & W. Rouse, Computer Networking: A Topdown Approach Featuring, Pearson Education.
2. Behrouz A. Foruzan, Data communication and Networking, Tata McGraw-Hill, 2004.
3. William Stallings, Data and Computer Communication, Sixth Edition, Pearson Education, 2000.

AV322

POWER ELECTRONICS

(4 - 0 - 0) 4 credits

Elements of Power Electronics ; Converters - Converter Dynamics and Control; DC to DC conversion - Buck, Boost and Buck-Boost converters - circuit configuration and analysis with different loads ; Inverters - single phase and three phase bridge inverters and PWM inverters, Single phase AC voltage regulators and cyclo converter ; Applications - Drive application of power electronic converter, UPS, SMPS active power filters, electronic ballast, induction heater and advanced control of power electronic circuits using microprocessors, Introduction to conductor EMI.

Textbooks:

1. M.H. Rashid, Power Electronics – Circuits, devices and applications, PHI, New Delhi, 1995.

References:

1. P.C. Sen, Modern Power Electroncis, Wheeler Publishers, New Delhi, 1998.
2. G.K. Dubey Doradia, S.R. Joshi and R.M. Sinha, Thyristorised Power Controllers, New Age International Publishers, New Delhi, 1996.
3. Ned Mohan, Tore M. Undeland, William P. Robbins, Power Electronics: Converters, Applications, and Design, 2nd Ed., 2005.

AV323

RADAR SYSTEMS

(3 - 0 - 0) 3 credits

Nature of Radar and Applications, Simple form of Radar Equation, Radar Block Diagram and Operation, Prediction of Range Performance, Minimum Detectable Signal, Radar Receivers,

Receiver Noise and SNR, Integration of Radar Pulses, Radar Cross Section of Targets, Transmitter Power, CW and Frequency Modulated Radar, MTI and Pulse Doppler Radar, Tracking Radar, Detection of Radar Signals in Noise, Airborne Radar, Space borne Radar, Synthesis aperture radar, SHAR and MST radar.

Textbooks/References:

1. M.I. Skolnik, Introduction to Radar Systems, McGraw hill, 2000.
2. M.I. Skolnik, Radar Handbook, McGraw hill, 2nd edition, 1990.
3. A.K. Sen and A.B. Battacharya, Radar Systems and Radar Aids to Navigation, Khanna Publications, 1988.

E01	ELECTIVE I	(3 - 0 - 0) 3 credits
------------	-------------------	------------------------------

HS321	PRINCIPLES OF MANAGEMENT SYSTEMS	(3 - 0 - 0) 3 credits
--------------	---	------------------------------

Personnel Management: Introduction – changing role of personnel manager – new people management – manpower planning – recruitment and selection – performance appraisal – workers participation in management – grievance handling.

Industrial Management: Management Functions – organization – principles of planning – management by objectives – organization structures – principles of organizing – span of control – delegation, leadership, directing, and controlling.

Project Management: Development of project network – project representation – project scheduling – linear time-cost trade-offs in projects: a heuristic approach – project monitoring and control with PERT.

References:

6. Memoria, C. B. and Gankar, S. V., Personnel Management - Text and Cases, Himalaya Publishing House (2007).

AV341	COMPUTER NETWORKS LAB	(0 - 0 - 3) 1 credit
--------------	------------------------------	-----------------------------

2. Basics of Network Simulator NS-2
3. Usage of 'awk' parser and trace file formats.
4. Goodput Vs Throughput measurement
5. Comparison of Static Vs Dynamic Routing

6. Ethernet behaviour
7. Early Packet Drop Regimes
8. Switching schemes
9. Routing Protocols
10. Multicast Routing Protocols
11. TCP Congestion Control methods

AV342

POWER ELECTRONICS LAB

(0 - 0 - 3) 1 credit

Part I – Simulation using MATLAB and PSpice

- Uncontrolled and Controlled rectification
- Dc-dc converters
- Inverters
- Drives

Part II – Laboratory practice

- Study of SCR and determination of SCR parameters
- R and RC firing circuits for thyristors
- Controlled and uncontrolled rectifier circuits.
- Dc Motor Speed Control
- Linear and Switching Regulator
- DC - DC converter design
- Motor Drive experiments
- Solar power array simulation.

AV451

SUMMER INTERNSHIP AND TRAINING

(0- 0 - 0) 3 credits

SEMESTER VII

AV411	NAVIGATION SYSTEMS AND SENSORS	(3 - 1 - 0) 4 credits
--------------	---------------------------------------	------------------------------

Introduction to navigation, vehicle modeling, beacon-based navigation systems. Introduction to Inertial Sensors and Inertial Navigation. Initial Calibration and Alignment algorithms. Global Positioning System (GPS). GPS /INS data fusion algorithms. Simultaneous Localization and Mapping (SLAM), Practical applications of vehicle navigation systems in both structured and unstructured environments, sensor fusion.

Textbooks/References:

1. Slater J.M., Donnel C.F.O, Onertial Navigation analysis and design, McGraw Hill, New York, 1964.
2. Myron Kyton, Walfred Fried, Avionics Navigation systems, 2nd edition, John Willy & Sons, 1997.
3. Albert D Helfrick, Modern Aviation Electronics: 2nd Ed., PHI, 1994.

E02	ELECTIVE II	(3 - 0 - 0) 3 credits
------------	--------------------	------------------------------

E03	ELECTIVE III	(3 - 0 - 0) 3 credits
------------	---------------------	------------------------------

E04	ELECTIVE IV	(3 - 0 - 0) 3 credits
------------	--------------------	------------------------------

I01	INSTITUTE ELECTIVE	(3 - 0 - 0) 3 credits
------------	---------------------------	------------------------------

AV431	NAVIGATION SYSTEMS AND SENSORS LAB	(0 - 0 - 3) 1 credit
--------------	---	-----------------------------

- 3D Gyro
- Servo Accelerometer
- Checkout Systems
- Un manned aerial vehicle system
- Hexapod

AV452	COMPREHENSIVE VIVA-VOCE I	(0 - 0 - 0) 2 credits
--------------	----------------------------------	------------------------------

SEMESTER VIII

AV453	COMPREHENSIVE VIVA-VOCE II	(0 - 0 - 0) 3 credits
--------------	-----------------------------------	------------------------------

AV454	PROJECT WORK	(0 - 0 - 0) 12 credits
--------------	---------------------	-------------------------------

ELECTIVE COURSE

AV461	ADVANCED CONTROL THEORY	(3 - 0 - 0) 3 credits
--------------	--------------------------------	------------------------------

State space Approach: State space modeling of physical systems – diagonal and Jordan canonical forms - Solution of Linear Time Invariant (LTI) state equation – Cayley Hamilton theorem – Controllability and Observability Tests – Kalman decomposition technique - Controller design by state feedback – Full order/reduced order observer design – observer based state feedback control - stability definitions in state space domain.

Adaptive control theory: System Identification – Frequency – Impulse – Step Response methods –Off-line – on line methods – Least square – Recursive least square – fixed memory – stochastic approximate method. MRAS & STC: The gradient approach – MIT rule Liapunov Functions – Pole placement control – minimum variance control – Predictive control.

Text Books:

1. Karl.J.Astrom, Bjorn Witten Mark, Adaptive Control, 2nd Ed., Pearson Education Pvt. Ltd.
2. M.Gopal, 'Digital Control Systems and State Space Method', 3rd Ed., TMH, 2008.

References:

1. Katsuhiko Ogata, 'Modern Control Engineering', PHI -India, New Delhi 1989.
2. Fairman, 'Linear Control Theory: State Space Approach', John Wiley, 1998.
3. John S. Bay, 'Fundamentals of Linear State Space Systems', McGraw Hill, 1998.
4. Isermann R, 'Digital Control System vol. I & II', Narosa Publishing House, Reprint 1993.
5. Mendal JM, 'Discrete Technique of Parameter Estimate', Marcel Dekkas, New York, 1973.

AV462	EMBEDDED SYSTEM AND REAL TIME OS	(3- 0 - 0) 3 credits
--------------	---	-----------------------------

Review of Embedded Hardware: Gates - Timing Diagram- Memory –microprocessors. Interrupts Microprocessor Architecture-Interrupt Basics-Shared Data Problem-Interrupt latency. Software Development: Round–Robin, Round robin with Interrupts, function-Queue- Scheduling Architecture, Algorithms. Introduction to - Assembler- Compiler –Cross Compilers and Integrated Development Environment (IDE). Object Oriented Interfacing, Recursion, Debugging strategies, Simulators. Embedded Microcomputer Systems - Motorola MC68H11: Motorola MC68H11 Family Architecture, Interfacing methods Microchip PIC Micro controller: Introduction, CPU Architecture- Registers- Instruction sets addressing modes- Loop timing-Timers- Interrupts, Interrupt timing, I/O Expansion, I2C Bus Operation Serial EEPROM, Analog to Digital converter, UART-Baud Rate-Data Handling-Initialization, Special Features – Serial Programming-Parallel Slave Port.

Real Time Operating Systems: Task and Task States, Tasks and data, Semaphores and shared Data Operating system Services-Message queues-Timer function-Events-Memory Management, Interrupt Routines in an RTOS environment, Basic design using RTOS.

Text/Reference Books:

1. Wayne Wolf, Computers as Components - Principles of Embedded Computer System Design, Morgan Kaufmann Publisher, 2006.
2. David E-Simon, An Embedded Software Primer, Pearson Education, 2007.
3. K.V.K.K.Prasad, Embedded Real-Time Systems: Concepts, Design & Programming, dreamtech press, 2005.
4. Tim Wilmshurst, An Introduction to the Design of Small Scale Embedded Systems, Pal grave Publisher, 2004.

5. Sriram V Iyer, Pankaj Gupta, Embedded Real Time Systems Programming, Tata Mc-Graw Hill, 2004.
6. Tammy Noergaard, Embedded Systems Architecture, Elsevier, 2006.

AV463	SOFT COMPUTING	(3- 0 - 0) 3 credits
--------------	-----------------------	-----------------------------

Introduction of Soft-computing tools - Neural Networks, Fuzzy Logic, Genetic Algorithm, and Probabilistic Reasoning; Neural network approaches in engineering analysis, design and diagnostics problems; Applications of Fuzzy Logic concepts in Engineering Problems; Engineering optimization problem solving using genetic algorithm; applications of probabilistic reasoning approaches.

Text/Reference Books:

1. S. Rajasekaran and G.A.Vijaylakshmi Pai.. Neural Networks Fuzzy Logic, and Genetic Algorithms, Prentice Hall of India.
2. K.H.Lee.. First Course on Fuzzy Theory and Applications, Springer-Verlag.
3. J. Yen and R. Langari.. Fuzzy Logic, Intelligence, Control and Information, Pearson Education.

AV464	ADVANCED DSP AND ADAPTIVE FILTER	(3- 0 - 0) 3 credits
--------------	---	-----------------------------

Discrete Random Process: Expectation, Variance and Co-variance, Uniform, Gaussian and Exponentially distributed noise, Hilbert space and inner product for discrete signals, Energy of discrete signals, Parseval's theorem, Wiener Khintchine relation, power spectral density, Sum decomposition theorem, Spectral factorization theorem. Spectrum Estimation : periodogram, Non – parametric methods of spectral estimation Correlation method, WELCH method –AR, MA, ARMA models. Tule – Walker method. Linear Estimation and Prediction: ML estimate – Efficiency of estimator, Cramer Rao bound - LMS criterion. Wiener filter – Recursive estimator – Kalman estimator – Linear prediction, Analysis and synthesis filters, Levinson resursion, Lattice realization. Adaptive filters: FIR adaptive filter – Newton's Steepest descent algorithm – Widrow Hoff LMS adaptation algorithms – Adaptive noise cancellation, Adaptive equalizer, Adaptive echo cancellors.

Text/Reference books:

1. M. Hays: Statistical Digital Signal Processing and Modelling, John Willey and Sons, 1996.
2. Simon Haykin: Adaptive Filter Theory, Prentice Hall, 1996
3. "Adaptive Filters :Theory and Applications", by B. Farhang-Boroujeny, John Wiley and Sons, 1999.
4. John G Proakis and Manolakis, " Digital Signal Processing Principles, Algorithms and Applications", Pearson, Fourth Edition, 2007.
5. Sophocles J. Orfanidis, Optimum Signal Processing, An Introduction, McGraw Hill, 1990.

AV465	ROBUST AND OPTIMAL CONTROL	(3- 0 - 0) 3 credits
--------------	-----------------------------------	-----------------------------

Signals and systems, Vector space, Norms, Matrix theory: Inversion formula, Schur's complement, Singular Value Decomposition, Positive definiteness; Linear Matrix Inequality: Affine function, Convexity, Elimination lemma, S-procedure; Calculus of variation, Euler's Theorem, Lagrange multiplier. Linear fractional transformation (LFT), Different uncertainty structures: Additive, Multiplicative, Uncertainty in Coprime factors; Concept of loop shaping, Bode's Gain and phase relationship, Small Gain theorem. LQR, LQG, Hamiltonian matrix, Riccati

equation, H-infinity control, H-infinity Controller design via DGKF and LMI techniques, H-infinity loop shaping technique, Structured singular value (μ) synthesis, Design examples.

Text/Reference Books:

1. D.S.Naidu, Optimal Control Systems, CRC Press
2. Sinha, Linear Systems Optimal and Robust Control, CRC Press
3. D.E.Kirk, Optimal Control Theory An Introduction, PHI.
4. K.Morris, Introduction to Feedback Control, Academic Press.
5. Helton, Merino, Classical Control using H^∞ Methods, 1/e, SIAM Publications
6. Ozbay, Introduction to Feedback Control Theory, CRC Press
7. Gu, Petkov, Konstantinov, Robust Control Design with MATLAB, Springer India
8. Qiu, Zhou, Introduction to Feedback Control, Prentice Hall, 2009.

AV466	ESTIMATION AND STOCHASTIC THEORY	(3- 0 - 0) 3 credits
--------------	---	-----------------------------

Elements of probability theory - random variables-Gaussian distribution-stochastic processes-characterizations and properties-Gauss-Markov processes-Brownian motion process-Gauss-Markov models - Optimal estimation for discrete-time systems - fundamental theorem of estimation-optimal prediction.

Optimal filtering - Weiner approach-continuous time Kalman Filter-properties and implementation-steady-state Kalman Filter-discrete-time Kalman Filter-implementation-sub-optimal steady-state Kalman Filter-Extended Kalman Filter-practical applications.

Optimal smoothing - Optimal fixed-interval smoothing optimal fixed-point smoothing-optimal fixed-lag smoothing-stability-performance evaluation.

Text/Reference books:

1. M.D. Srinath, P.K. Rajasekaran and R. Viswanathan: Statistical Signal Processing with Applications, PHI, 1996.
2. D.G. Manolakis, V.K. Ingle and S.M. Kogon: Statistical and Adaptive Signal Processing, McGraw Hill, 2000.
3. S. M. Kay: Modern Spectral Estimation, Prentice Hall, 1987.

5. S. M. Kay, "Fundamentals of Statistical Signal Processing: Estimation Theory", Prentice Hall PTR, 1993.
6. M.S. Grewal, A.P. Andrews, "Kalman filtering : Theory and Practice", Second edition, John Wiley & Sons, 2001.
7. C.K. Chui, G. Chen, "Kalman Filtering with Real-Time Applications", Third edition, Springer-Verlag, 1999.
8. R.G. Brown, Y.C. Hwang, "Introduction to Random Signals and Applied Kalman Filtering", Second edition, John Wiley & Sons, 1992.

AV467	INTRODUCTION TO OPTIMIZATION AND OR	(3- 0 - 0) 3 credits
--------------	--	-----------------------------

Vector spaces and matrices, transformations, eigenvalues and eigenvectors, norms; geometrical concepts -- hyperplanes, convex sets, polytopes and polyhedra; unconstrained optimization -- condition for local minima; one dimensional search methods -- golden section, fibonacci, newtons, secant search methods; gradient methods -- steepest descent; newton's method, conjugate direction methods, conjugate gradient method; constrained optimization -- equality conditions, lagrange condition, second order conditions; inequality constraints -- karush-kuhn-tucker condition; convex optimization; introduction to assignment problem, decision analysis,

dynamic programming and linear programming;

Text/Reference Books:

1. An Introduction to Optimization, Edwin K. P. Chong and Stanislaw H. Zak, Wiley Interscience, 2008.
2. D. G. Luenberger, Optimization by vector space methods, New York, Wiley, 1969.
3. Convex Optimization Theory, D. P. Bertsekas, Athena Scientific optimization and computation series, 2009
4. Introduction to Operations Research, Frederick S. Hillier, Gerald J. Lieberman, McGraw-Hill, 2010

AV468	DIGITAL CONTROL SYSTEM	(3- 0 - 0) 3 credits
--------------	-------------------------------	-----------------------------

Digital control systems – sample and hold systems - Jury stability criterion – Implementation of digital controllers – tunable PID controllers – Digital compensator design using root locus and frequency response methods.

Linear versus nonlinear systems - Describing function analysis - common nonlinearities - Analysis of non-linear systems using phase plane technique - condition for stability - Stability in the sense of Lyapunov and absolute stability - Popov's stability criterion - Lure's Transformation. Non-linear control system design problem - Concept of variable - structure controller and sliding control.

Text Book:

1. M.Gopal, 'Digital Control and State variable methods: Conventional and Intelligent control systems', Tata McGraw Hill, 3rd Ed., 2009.

References:

1. H. K. Khalil, 'Nonlinear Systems', Prentice Hall, 3rd Ed., 2002.

3. Nijmeijer, Henk, Schaft, Arjan van der, 'Nonlinear Dynamical Control Systems', Springer, 1990.
4. Graham, McRuer, Analysis of Nonlinear Control Systems.

AV469	EMI / EMC	(3- 0 - 0) 3 credits
--------------	------------------	-----------------------------

Aspects of EMC with examples, Common EMC units, EMC requirements for electronic systems, Radiated emissions, Conducted emissions, ESD. Application of EMC design, Wires, PCB lands, Component leads, resistors, capacitors, inductors, and ferrites. Electromechanical devices, Digital circuit devices. Mechanical switches (as suppression) , Simple emission models for wires and PCB lands, Line impedance stabilization network (LISN) , Power supply filters. Power supplies including SMPS. Three conductor lines and crosstalk, Shielded wires, Twisted wires, Multiconductor lines and effects of incident fields, Shielding, Origin effects, prevention of ESD event, its hardware and immunity. System design for EMC, Grounding, System configuration, PCB design.

Text/Reference books:

1. William Duff G., & Donald White R. J, "Series on Electromagnetic Interference and Compatibility", Vol. 5, EMI Prediction and Analysis Technique – 1972.

2. V.P. Kodali, "Engineering Electromagnetic Compatibility", S. Chand, 1996.
3. Weston David A., "Electromagnetic Compatibility, Principles and Applications", 1991.
4. Kaiser B. E., "Principles of Electromagnetic Compatibility", Artech House, 1987.

AV470	DIGITAL IMAGE PROCESSING	(3- 0 - 0) 3 credits
--------------	---------------------------------	-----------------------------

Digital Image Fundamentals: Elements of visual perception – Image sampling and quantization
Basic relationship between pixels – Basic geometric transformations.

Image fundamentals and image restoration: Spatial Domain methods-Spatial filtering:-
Frequency domain filters –Model of Image Degradation/restoration process – Noise models –
Inverse filtering -Least mean square filtering – Constrained least mean square filtering – Blind
image restoration – Pseudo inverse – Singular value decomposition.

Multi-resolution Analysis and Compression: Multi Resolution Analysis: Image Pyramids – Multi
resolution expansion – Wavelet Transforms. Image compression: Fundamentals Elements of
Information Theory – Error free compression – Lossy Compression – Compression Standards.
Wavelet coding – Basics of Image compression standards: JPEG, MPEG, Basics of Vector
quantization.

Image Segmentation and Image Analysis: Edge detection – Thresholding - Region Based
segmentation – Boundary representation: boundary descriptors: Texture, Motion image
analysis. Color Image Processing – Color Models-Color Image enhancement-Segmentation
Object Recognition and Image Understanding: Patterns and pattern classes - Decision-Theoretic
methods - Structural methods-3D Vision

Text Books:

1. Rafael C Gonzalez, Richard E Woods 2nd Edition, Digital Image Processing - Pearson Education 2009.

References:

1. William K Pratt, Digital Image Processing John Willey, 2001.
2. Millman Sonka, Vaclav hlavac, Roger Boyle, Broos/colic, Image Processing Analysis and Machine Vision –, Thompson Learnriy, 1999.
3. A.K. Jain, Fundamentals of Digital Image Processing, PHI, New Delhi, 1995.
4. Chanda Dutta Magundar , Digital Image Processing and Applications, Prentice Hall of India, 2000.

AV471	VLSI DESIGN	(3- 0 - 0) 3 credits
--------------	--------------------	-----------------------------

Introduction, Manufacturing process: CMOS integrated circuits, Device Physics: MOSFET, CMOS
inverter: Characteristics, Static and Dynamic Logic Gates, Sequential logic Gates, Implementation
for Digital ICs. Timing Issues in Digital Circuits, Designing Memory and Array Structures.

Text Book:

1. Jan M Rabaey, Anantha Chandrakasan, Borivoje Nikolic, Digital Integrated Circuits, Prentice Hall, 2002.

References:

1. Pucknell, Basic VLSI Design, Prentice Hall, 2008.
2. Fabricius, Eugene D, Introduction to VLSI Design, McGraw-Hill, 1990.

3. Neil H E Weste, Kamran Eshraghian, Principles of CMOS VLSI Design, A system perspective, Addison-Wesley, 1985.
4. R Jacob Baker, Harry, David E, CMOS Circuit Design, Layout, and Simulation, Wiley, 2011.

AV472

**OPTO - ELECTRONICS AND FIBER OPTICS
COMMUNICATION**

(3- 0 - 0) 3 credits

Review of P-N junction characteristics – semiconductor-hetero junction-LEDs (-spontaneous emission-LED structure-surface emitting-Edge emitting-Injection efficiency- recombination efficiency-LED characteristics-spectral response-modulation-Band width. Laser diodes-Basic principle-condition for gain-Laser action-population inversion-stimulated emission-Injection faster diode-structure-temperature effects-modulation-comparison between LED and ILDs. Optical detectors-principle-absorption coefficient-detector characteristics-Quantum efficiency-responsivity-response time-bias voltage-Noise in detectors P-N junction-photo diode -B. W-Noise-photo transistor. Optical Fibre-structure - propagation-wave equation-phase and group velocity-transmission characteristics-attenuation-absorption-scattering losses-dispersion-fibre bend losses-source coupling, splices and connectors-wave length division multiplexing. Optical fibre system-system design consideration-fibre -source limitations -pre-amplifier-equalization-Fibre-optic link analysis-typical link design.

Text Books:

1. Gerd Keiser, Optical Fiber Communications, 3rd Edition, McGraw Hill Publications, 2000.

Reference Books:

1. Pallab Bhattacharya, Semiconductor Opto electronics Devices, Pearson Education
2. John M Senior Optical fibre Communication Systems-Principles and practice, PHI.
3. John Gower, Optical communication Systems, PHI.

AV473

INFORMATION THEORY AND CODING

(3- 0 - 0) 3 credits

Sources-memoryless and Markov; Information; Entropy; Extended sources; Shannon's noiseless coding theorem; Source coding; Mutual information; Channel capacity; BSC and other channels; Shannon's channel capacity theorem; Continuous channels; Comparison of communication systems based on Information Theory; Channel Coding-block and convolutional. Block codes-majority logic decoding; Viterbi decoding algorithm; Coding gains and performance.

Text/Reference books:

1. Shu Lin & Daniel J. Costello.Jr., Error Control Coding : Fundamentals and Applications, Prentice Hall Inc.,Englewood Cliffs, NJ.
2. Thomas M. Cover, Joy A. Thomas, Elements of Information theory, 2nd ed., John Wiley & Sons Pvt. Ltd.
3. Simon Haykin. Communication Systems, 3rd ed., John Wiley & Sons Pvt. Ltd.
4. Taub & Schilling. Principles of Communication Systems, 2nd ed., TataMcGraw Hill, New Delhi.
5. Das, Mullick & Chatterjee. Principles of Digital Communication, Wiley Eastern Ltd.
6. The theory of error-correcting codes by F. J. MacWilliams and N. J. A. Sloane (North-Holland publishers).
7. Algebraic codes for data transmission by Richard Blahut (Cambridge).

AV474	CRYPTOGRAPHY	(3- 0 - 0) 3 credits
--------------	---------------------	-----------------------------

Introduction to number theory – Symmetric key and Public key crypto systems which includes pseudorandom functions and permutations, block ciphers, symmetric encryption schemes, security of symmetric encryption schemes, hash functions, message authentication codes (MACs), security of MACs, PKI, public-key(asymmetric) encryption, digital signatures, security of asymmetric encryption and digital signature scheme.

Chaos base cryptography systems – quantum computing – introduction to smartcard technology.

Text/Reference books:

1. William Stallings, "Cryptography And Network Security – Principles and Practices", Pearson Education, Third Edition, 2003.
2. Behrouz A. Foruzan, "Cryptography and Network Security", Tata McGraw-Hill, 2007
3. Bruce Schneier, "Applied Cryptography", John Wiley & Sons Inc, 2001.
4. Wade Trappe and Lawrence C. Washington , " Introduction to Cryptography with coding theory" , Pearson Education, 2007.
5. Wenbo Mao, " Modern Cryptography Theory and Practice" , Pearson Education, 2007.
6. Thomas Calabrese, "Information Security Intelligence: Cryptographic Principles and Applications", Thomson Delmar Learning,2006.

AV475	MOBILE COMMUNICATION	(3- 0 - 0) 3 credits
--------------	-----------------------------	-----------------------------

Cellular Concept: Frequency Reuse, Channel Assignment, Hand Off, Interference and System Capacity, Tracking And Grade Of Service, Improving Coverage and Capacity In Cellular Systems.

Mobile Radio Propagation : Free Space Propagation Model, Outdoor Propagation Models, Indoor Propagation Models, Small Scale Multipath Propagation, Impulse Model, Small Scale Multipath Measurements, Parameters Of Mobile Multipath Channels, Types Of Small Scale Fading, Statistical Models For Multipath Fading Channels.

Modulation Techniques: Minimum Shift Keying, Gaussian MSK, M-ARY QAM, M-ARY FSK, Orthogonal Frequency Division Multiplexing, Performance of Digital Modulation In Slow-Flat Fading Channels And Frequency Selective Mobile Channels.

Equalization: Survey of Equalization Techniques, Linear Equalization, Non-Linear Equalization, Algorithms for Adaptive Equalization. Diversity Techniques, Rake Receiver. **Coding:** Vocoder, Linear Predictive Coders, Selection of Speech Coders for Mobile Communication, GSM Codec and RS Codes for CDPD.

Multiple Access Techniques: FDMA, TDMA, CDMA, SDMA, Capacity of Cellular CDMA and SDMA.

Wireless Systems and Standards: Second Generation and Third Generation Wireless Networks and Standards, WLL, Blue Tooth. AMPS, GSM, IS-95 and DECT

Text Book:

1. T. Rappaport, "Wireless Communication: Principles and Practice", Prentice Hall PTR

References:

1. Palanivelu, T. G. ,Nakkeeran, R, "Wireless And Mobile Communication", PHI.
2. Stüber, Gordon L., " Principles of Mobile Communication" 2nd ed., Springer publications.

AV476	MICROWAVE INTEGRATED CIRCUITS	(3- 0 - 0) 3 credits
--------------	--------------------------------------	-----------------------------

Introduction to microwave integrated circuits: Active and passive components. Analysis of microstrip lines: variational method, conformal transformation, numerical analysis; losses in

microstrip lines; Slot line and Coupled lines; Design of power dividers and combiners, directional couplers, hybrid couplers, filters. Microstrip lines on ferrite and garnet substrates; Isolators and circulators; Lumped elements in MICs. Technology of MICs: Monolithic and hybrid substrates; thin and thick film technologies, computer aided design.

Text/Reference books:

1. Davis W. Alan, Van, Microwave Semiconductor Circuit Design, Nostrand, Reinhold, 1984.
2. Gonzalez G., Microwave Transistor Amplifier: Analysis and Design, Prentice Hall 1984.
3. Samuel Y. Liao, Microwave Circuit Analysis and Amplifier Design, Prentice Hall 1987.
4. Ralph S. Carson, High Frequency Amplifier, Wiley Interscience, 1982.

AV477

ANTENNA ENGINEERING

(3- 0 - 0) 3 credits

Antenna Fundamentals -Common Types of Antennas -Fundamentals and Definitions - Directivity -Antenna Gain and Efficiency -Antennas in Communications Links -Wire Antennas- Radiation Integrals and Auxiliary Potential Functions - Solutions of the Inhomogeneous Vector Potential Wave Equation - Linear Wire Antennas – The Ideal Dipole - Electrically Short or Small Dipoles - The Half-Wave Dipole - The Dipole of Arbitrary Length - Antennas on or Near PEC Ground Planes - Antenna Arrays and Impedance - Antenna Arrays - Graphical Method for Developing the Radiation Pattern- Pattern Multiplication Theorem with Examples - Half-Power Beam Width (HPBW) -Directivity - Even Element Linear Array with Uniform Spacing and Nonuniform Excitation - Directivity for Binomial Arrays -Planar Arrays -Mutual Impedance and Driving Point Impedance of Antenna Arrays -Yagi-Uda Antennas

Text/Reference Books:

1. Constantine A. Balanis, Antenna Theory, Analysis and Design, Second edition, John Wiley and Son, Inc.
2. Warren L. Stutzman, Gary A. Thiele, Antenna Theory and Design, 2nd Edition, John Wiley and Son, Inc.

AV478

SATELLITE COMMUNICATION

(3- 0 - 0) 3 credits

Basic Principles- General features, frequency allocation for satellite services, properties of satellite communication systems. Satellite Orbits- Kepler's laws, orbital dynamics, orbital characteristics, satellite spacing and orbital capacity, angle of elevation, eclipses, launching and positioning, satellite drift and station keeping. Satellite Construction - attitude and orbit control system; telemetry, tracking and command; power systems, communication subsystems, antenna subsystem, equipment reliability and space qualification. Satellite Links-, general link design equation, system noise temperature, uplink design, downlink design, complete link design, effects of rain. Earth Station - earth station subsystem, different types of earth stations. The Space Segment Access and Utilization-space segment access methods, TDMA, FDMA, CDMA, SDMA, assignment methods.

Text Book:

1. Dennis Roddy, Satellite Communications, McGraw-Hill Publication Third edition 2001

References:

1. Timothy Pratt – Charles Bostian & Jeremy Allmuti, Satellite Communications, John Willy & Sons (Asia) Pvt. Ltd. 2004.
2. Wilbur L. Pritchards Henri G.Suyder Hond Robert A.Nelson, Satellite Communication Systems Engineering, Pearson Education Ltd., Second edition 2003.
3. M.Richharia, Satellite Communication Systems Design Principles, Macmillan Press Ltd. Second Edition, 2003.

AV479	COMPUTER GRAPHICS	(3- 0 - 0) 3 credits
--------------	--------------------------	-----------------------------

Graphics hardware and display devices; graphics primitives- drawing lines and curves; 2d and 3d transformations; segments and their applications; generating curves, surfaces and volumes in 3d, wire-frame models, Bezier and spline curves and surfaces; geometric modeling- elementary geometric algorithms for polygons, boundary representations, constructive solid geometry, spatial data structures; hidden surface and line elimination; rendering- shading, light models, realistic image synthesis techniques, textures and image-based rendering; video games and computer animation.

Text/Reference Books:

1. Foley, van Dam, Feiner and Hughes, Computer Graphics (Principles and Practice), Addison Wesley.
2. D Hearn and P M Baker, Computer Graphics, Printice Hall of India.
3. D F Rogers, Mathematical Elements for Computer Graphics, McGraw Hill.
4. D F Rogers, Procedural Elements for Computer Graphics, McGraw Hill.
5. Edward Angele, Interactive Computer Graphics, A top-down approach with OpenGL, Addison Wesley.
6. G Farin, Curves and Surfaces for Computer Aided Geometric Design, Academic Press.

AV480	GRAPH THEORY AND OR	(3- 0 - 0) 3 credits
--------------	----------------------------	-----------------------------

Graphs -- paths and circuits, trees and fundamental circuits, cut-sets and cut-vertices, planar and dual graphs, vector spaces of graphs, matrix representation of graphs; transport networks, maximal flow, linear programming, minimal cut, maxflow-mincut theorem, minimal-cost flows, multicommodity flow, activity network, game theory.

Text/Reference Books:

1. Narsingh Deo, Graph Theory With Applications To Engineering And Computer Science, PHI, Indi, 1974
2. T. B. Boffey, Graph theory in operations research, Macmillan, 1982

AV481	MODERN ALGEBRA AND TENSORS	(3- 0 - 0) 3 credits
--------------	-----------------------------------	-----------------------------

Sets, groups, fields, rings, isomorphisms, vector spaces, modules; vectors and tensors in a finite-dimensional space, vector and tensor analysis in euclidean space, curves and surfaces in three-dimensional euclidean space, eigenvalue problem and spectral decomposition of second-order tensors, fourth order-tensors.

Text/Reference Books:

1. William J. Gilbert, W. Keith Nicholson, Modern Algebra with Applications, John Wiley and Sons, 2004.
2. Mikhail Itskov, Tensor Algebra and Tensor Analysis for Engineers, Springer, 2008.

AV482**DATA STRUCTURE AND DBMS****(3- 0 - 0) 3 credits**

Review of basic data structures and their realization in object oriented environment. The following topics will be covered with emphasis on formal analysis and design, Dynamic Data structures; 2-3 trees, Red-black trees, binary heaps, binomial and Fibonacci heaps, Skip lists, universal hashing. Data structures for maintaining ranges, intervals and disjoint sets with applications. Basic algorithmic techniques like dynamic programming and divide- and-conquer, Sorting algorithms with analysis, integer sorting algorithms with analysis, integer selection, Graph algorithms like DFS with applications, MSTs and shortest paths.

Database System Architecture - Data Abstraction, Data Independence, Data Definition and Data Manipulation Languages. Data Models - Entity-Relationship, Network, Relational and Object Oriented Data Models, Integrity Constraints, and Data Manipulation Operations. Relational Query Languages: Relational Algebra, Tuple and Domain Relational Calculus, SQL and QBE. Relational Database Design: Domain and Data dependency, Armstrong's Axioms, Normal Forms, Dependency Preservation, Lossless design. Query Processing and Optimization: Evaluation of Relational Algebra Expressions, Query Equivalence, Join strategies, Query Optimization Algorithms. Storage Strategies: Indices, B-trees, Hashing; Transaction Processing : Recovery and Concurrency Control, Locking and Timestamp based Schedulers, Multiversion and Optimistic Concurrency Control schemes. Advanced Topics; Object-oriented and Object Relational Databases, Logical Databases, Web Databases, Distributed Databases, Data Warehouse and Data Mining.

Text/Reference Books:

1. Gregory L. Heileman , Data Structure, Algorithm and OOP, Tata Mc Graw Hill, NewDelhi.
2. Adam Drozdek, Data Structures & Algorithm in C++,Vikas publication House.
3. Silberschatz, H. Korth, Database System Concepts, 5th Edition, McGraw-Hill.
4. Raghu Ramakrishnan, Database Management Systems, Johannes Gehrke 4th Edition, McGraw-Hill

AV483**SOFTWARE ENGINEERING****(3- 0 - 0) 3 credits**

S/W life cycle; problem of S/W production and the need for S/W engineering; Concepts and techniques relevant to production of large software systems: Structured programming, top-down design and development, information hiding; strength, coupling and complexity measures; procedural, data, and control abstraction; specifications; organization and management of large software design projects; program libraries; documentation, design methods and testing; several programming projects of varying size undertaken by students working singly and in groups using software specification tools, S/W project management; parameter for cost estimation.

Text/Reference Books:

2. I Sommerville, Software Engineering V edition: , Addison Wesley, 1996.
3. P fleeger, Software Engineering, Prentice Hall, 1999.
4. Carlo Ghezzi, Mehdi Jazayari, Dino Mandrioli, Fundamental of Software Engineering, Prentice Hall of India 1991.

AV484**WIRELESS MESH NETWORK****(3- 0 - 0) 3 credits**

Introduction and overview of Wireless Mesh Networks, Evolution of Wireless Mesh Networks, Architectural issues in Wireless Mesh Networks, Capacity of Wireless Mesh Networks, Layer-wise Protocol design issues in Wireless Mesh Networks, MAC layer protocols for Wireless Mesh Networks, Network layer protocols for Wireless Mesh Networks, Transport layer protocols for Wireless Mesh Networks, Load Balancing in Wireless Mesh Networks, Wide Area Wireless Mesh Networks, Design issues for Wide Area Wireless Mesh Networks, Resource allocation problems in Wireless Mesh Networks, Hybrid wireless mesh networks including WiMAX networks, and Layer-wise open research problems on protocol design for Wireless Mesh Networks.

Text/Reference Books:

1. Yan Zhang, Jijun Luo, and Honglin Hu, Wireless Mesh Networking: Architectures, Protocols and Standards, Auerbach Publications, December 2006.
2. Ian Akyildiz and Xudong Wang, Wireless Mesh Networks, John Wiley and Sons, March 2009.
3. C. Siva Ram Murthy and B. S. Manoj, Ad hoc Wireless Networks: Architectures and Protocols, Prentice-Hall PTR, New Jersey, May 2004.

AV485**MICROELECTRONICS AND MICROSYSTEM TECHNOLOGIES****(3- 0 - 0) 3 credits**

Introduction to Microelectronics and Microsystems: Classical scaling in CMOS, Moore's Law - Clean room concept, Growth of single crystal Si, Cleaning and etching -Thermal oxidation of silicon - Dopant diffusion in silicon - Thin film deposition (PVD, CVD, ALD etc.) - Ion-implantation – Lithography – Etching - CMOS Process integration- Advanced CMOS devices.

Microelectronic technologies for MEMS: MEMS Materials , Surface and Bulk Micromachining - MEMS Micro sensors, and applications - Mechanical, Inertial, Biological, Chemical, RF Applications etc. - Bonding & Packaging of MEMS - CMOS-MEMS Integration
